WOOL PRESS Safety bar Upgrade Kits

All makes and models:

STEVLYON

TPW

The MACBro Safety Bar upgrade kit adds another layer of safety to the lyco and stevlyon corner pinning wool press's. They can easily be retro fitted by a competent person on farm, or can be installed by the Macbro team in house, at an extra cost.

These kits are a direct replacement or upgrade if non fitted from new of the original Lyco safety bar, and as such have been in use as a safety system on lyco (and other brands) since the 1990s. As they are passive "no action required" to operate, they are a good choice for the safety in your wool shed. The bar sits above the feed sides of the press, and is mechanically interlocked to the valve levers, thus if an obstacle (persons arm etc) is caught, the bar will trip and reverse the platen up, to clear obstacle and release.

- Fits all Lyco and Stevlyon corner pinner's.
- Quick and easy installation.
- Kit comes with safety bars to fit both sides, new levers, new pack clamps, hardware and instructions.
- *24 month warranty on parts (farm use)

*Note: The fitment of these kits (or any other safety device), does not guarantee the safety of your wool press, this is only an additional safety measure to help mitigate the possibility of a person being injured, and thus help with the overall safe working practice and training that should be used in all working environments.
