WOOL PRESS Motor & Pump Upgrade Kits

All makes and models:

STEVLYON

TPW

The MACBro Motor and Pump upgrade kit was developed to replace, or upgrade, existing wool press motors and Pumps that are worn out or just too noisy. *They can also be used as a replacement for machines that had petrol power packs fitted from new.

The Motor and Pump kit replaces the existing power pack completely, giving you a new quiet low revving Motor and hi flow pump, that is a drop in replacement. You can also get just a motor, or Pump separately. Suitable for most Lyco and other brands, just ask. The Kit comes with all necessary parts to fit up to your wool press, including Motor, Pump, Bell housing, adaptor to tank ^ DOL starter and instructions.

* Check with Macbro to see if your press is able to be easily converted.

^ DOL starter is optional and only needed/supplied in some cases.
